

EXPERIMENT 15

Determination and plotting of Inductance (i) Self-inductance and Mutual inductance of current carrying coil, (ii) solenoid and toroid with different (a) length and (b) circumferential area.

Aim:

To determine and plot Inductance (i) Self-inductance and Mutual inductance of current carrying coil, (ii) solenoid and toroid with different (a) length and (b) circumferential area.

Software required:

SCILAB version 6.0.1.

Program:

```

Enter the turns of self inductance: 55

Enter the flux value (Wb): 3×10^{-3}

Enter the current flowing in inductance (A): 5

Self Inductance = 297.000000 H

Enter the primary turns: 300

Enter the secondary turns: 400

Enter the ϕ_{12} value (Wb): 2×10^{-5}

Enter the ϕ_{21} value (Wb): 3×10^{-5}

Enter the current I1 (A): 5

Enter the current I2 (A): 6

Mutual Inductance M12 = 1200.000000 H

Mutual Inductance M21 = 1250.000000 H

Enter the length of solenoid (m): 5

Enter the radius of toroid (m): 5

Solenoid value = 1.256637×10^{-6}

Toroid value = 2.000000×10^{-7}

Theoretical calculations:

P NO : 15

elimination and plotting of Inductance (1) Self-Inductance and Mutual Inductance of current carrying coil, (2) Solenoid and toroid with different (a) length and (b) circumferential area.

Output :

Enter the turns of self inductance = 55
Enter the phi value = 2×10^{-3}
Enter the current flowing in inductance = 5 A
Enter the primary turn = 300
Enter the secondary turn = 400
Enter the ϕ_{12} = 2×10^{-5}
Enter the ϕ_{21} = 3×10^{-5}
Enter the current 1 = 5
Enter the current 2 = 6
Enter the length value = 5 cm
Enter the radius value = 5 mm

Practical Output :

" Self Inductance = 297.000000 H "
" Mutual Inductance M_{12} = 1200.000000 H "
" Mutual Inductance M_{21} = 1250.000000 H "
" Solenoid value = 1.256637 -06 "
" Toroid value = 2.000000 e-07 "

Theoretical Calculation :

The Self Inductance is

$$L = \frac{N\Phi}{I}$$

Substituting,

$$L = \frac{55 (3 \times 10^{-3})}{5}$$

$$L = \frac{165 \times 10^{-3}}{5}$$

$$L = 0.033 \text{ H}$$

Mutal Inductance (M_{12})

$$M_{12} = \frac{N_1 \phi_{12}}{I_2}$$

$$M_{12} = \frac{300 (2 \times 10^{-5})}{6}$$

$$M_{12} = \frac{6 \times 10^{-3}}{6}$$

$$M_{12} = 1 \times 10^{-3} \text{ H}$$

Mutual Inductance M_{21}

$$M_{21} = \frac{N_2 \phi_{21}}{I_1}$$

$$M_{21} = \frac{400 \times 3 \times 10^{-5}}{5}$$

$$M_{21} = \frac{12 \times 10^{-3}}{5}$$

$$M_{21} = 2.4 \times 10^{-3} \text{ H}$$

Solenoid Inductance

$$L_S = \frac{\mu N^2 A}{l}$$

$$A = \pi r^2 \quad r = 5 \text{ mm}, = 5 \times 10^{-3} \text{ m}$$

$$A = 3.14 \times (5 \times 10^{-3})^2$$

$$A = 7.854 \times 10^{-5} \text{ m}^2$$

$$L_S = \frac{(3 \times 10^{-3}) (55)^2 (7.854 \times 10^{-5})}{0.05}$$

$$L_S = 1.426 \times 10^{-2} \text{ H}$$

Result:

Thus determination and plotting of Inductance ,Self-inductance, Mutual inductance of current carrying coil, solenoid and toroid with different (a) length and (b) circumferential area are performed and verified successfully.
